

CIVIL COVER SHEET

The JS 44 civil cover sheet and the information contained herein neither replace nor supplement the filing and service of pleadings or other papers as required by law, except as provided by local rules of court. This form, approved by the Judicial Conference of the United States in September 1974, is required for the use of the Clerk of Court for the purpose of initiating the civil docket sheet. (SEE INSTRUCTIONS ON NEXT PAGE OF THIS FORM.)

I. (a) PLAINTIFFS

(b) County of Residence of First Listed Plaintiff _____
(EXCEPT IN U.S. PLAINTIFF CASES)

(c) Attorneys (Firm Name, Address, and Telephone Number)

DEFENDANTS

County of Residence of First Listed Defendant _____
(IN U.S. PLAINTIFF CASES ONLY)

NOTE: IN LAND CONDEMNATION CASES, USE THE LOCATION OF THE TRACT OF LAND INVOLVED.

Attorneys (If Known)

II. BASIS OF JURISDICTION (Place an "X" in One Box Only)

- ☐ 1 U.S. Government Plaintiff
- ☐ 2 U.S. Government Defendant
- ☐ 3 Federal Question
(U.S. Government Not a Party)
- ☐ 4 Diversity
(Indicate Citizenship of Parties in Item III)

III. CITIZENSHIP OF PRINCIPAL PARTIES (Place an "X" in One Box for Plaintiff and One Box for Defendant)

- | | PTF | DEF | | PTF | DEF |
|---|----------------------------|----------------------------|---|----------------------------|----------------------------|
| Citizen of This State | ☐ 1 | ☐ 1 | Incorporated or Principal Place of Business In This State | ☐ 4 | ☐ 4 |
| Citizen of Another State | ☐ 2 | ☐ 2 | Incorporated and Principal Place of Business In Another State | ☐ 5 | ☐ 5 |
| Citizen or Subject of a Foreign Country | ☐ 3 | ☐ 3 | Foreign Nation | ☐ 6 | ☐ 6 |

INSTRUCTIONS FOR ATTORNEYS COMPLETING CIVIL COVER SHEET FORM JS 44

Authority For Civil Cover Sheet

The JS 44 civil cover sheet and the information contained herein neither replaces nor supplements the filings and service of pleading or other papers as required by law, except as provided by local rules of court. This form, approved by the Judicial Conference of the United States in September 1974, is required for the use of the Clerk of Court for the purpose of initiating the civil docket sheet. Consequently, a civil cover sheet is submitted to the Clerk of Court for each civil complaint filed. The attorney filing a case should complete the form as follows:

- I.(a) Plaintiffs-Defendants.** Enter names (last, first, middle initial) of plaintiff and defendant. If the plaintiff or defendant is a government agency, use only the full name or standard abbreviations. If the plaintiff or defendant is an official within a government agency, identify first the agency and then the official, giving both name and title.
- (b) County of Residence.** For each civil case filed, except U.S. plaintiff cases, enter the name of the county where the first listed plaintiff resides at the time of filing. In U.S. plaintiff cases, enter the name of the county in which the first listed defendant resides at the time of filing. (NOTE: In land condemnation cases, the county of residence of the "defendant" is the location of the tract of land involved.)
- (c) Attorneys.** Enter the firm name, address, telephone number, and attorney of record. If there are several attorneys, list them on an attachment, noting in this section "(see attachment)".
- II. Jurisdiction.** The basis of jurisdiction is set forth under Rule 8(a), F.R.Cv.P., which requires that jurisdictions be shown in pleadings. Place an "X" in one of the boxes. If there is more than one basis of jurisdiction, precedence is given in the order shown below.
 United States plaintiff. (1) Jurisdiction based on 28 U.S.C. 1345 and 1348. Suits by agencies and officers of the United States are included here.
 United States defendant. (2) When the plaintiff is suing the United States, its officers or agencies, place an "X" in this box.
 Federal question. (3) This refers to suits under 28 U.S.C. 1331, where jurisdiction arises under the Constitution of the United States, an amendment to the Constitution, an act of Congress or a treaty of the United States. In cases where the U.S. is a party, the U.S. plaintiff or defendant code takes precedence, and box 1 or 2 should be marked.
 Diversity of citizenship. (4) This refers to suits under 28 U.S.C. 1332, where parties are citizens of different states. When Box 4 is checked, the citizenship of the different parties must be checked. (See Section III below; **NOTE: federal question actions take precedence over diversity cases.**)
- III. Residence (citizenship) of Principal Parties.** This section of the JS 44 is to be completed if diversity of citizenship was indicated above. Mark this section for each principal party.
- IV. Nature of Suit.** Place an "X" in the appropriate box. If there are multiple nature of suit codes associated with the case, pick the nature of suit code that is most applicable. Click here for: [Nature of Suit Code Descriptions](#).
- V. Origin.** Place an "X" in one of the seven boxes.
 Original Proceedings. (1) Cases which originate in the United States district courts.
 Removed from State Court. (2) Proceedings initiated in state courts may be removed to the district courts under Title 28 U.S.C., Section 1441. When the petition for removal is granted, check this box.
 Remanded from Appellate Court. (3) Check this box for cases remanded to the district court for further action. Use the date of remand as the filing date.
 Reinstated or Reopened. (4) Check this box for cases reinstated or reopened in the district court. Use the reopening date as the filing date.
 Transferred from Another District. (5) For cases transferred under Title 28 U.S.C. Section 1404(a). Do not use this for within district transfers or multidistrict litigation transfers.
 Multidistrict Litigation – Transfer. (6) Check this box when a multidistrict case is transferred into the district under authority of Title 28 U.S.C. Section 1407.
 Multidistrict Litigation – Direct File. (8) Check this box when a multidistrict case is filed in the same district as the Master MDL docket.
PLEASE NOTE THAT THERE IS NOT AN ORIGIN CODE 7. Origin Code 7 was used for historical records and is no longer relevant due to changes in statute.
- VI. Cause of Action.** Report the civil statute directly related to the cause of action and give a brief description of the cause. **Do not cite jurisdictional statutes unless diversity.** Example: U.S. Civil Statute: 47 USC 553 Brief Description: Unauthorized reception of cable service
- VII. Requested in Complaint.** Class Action. Place an "X" in this box if you are filing a class action under Rule 23, F.R.Cv.P.
 Demand. In this space enter the actual dollar amount being demanded or indicate other demand, such as a preliminary injunction.
 Jury Demand. Check the appropriate box to indicate whether or not a jury is being demanded.
- VIII. Related Cases.** This section of the JS 44 is used to reference related pending cases, if any. If there are related pending cases, insert the docket numbers and the corresponding judge names for such cases.

Date and Attorney Signature. Date and sign the civil cover sheet.

CIVIL ACTION NO. 6:18-CV-339

ORIGINAL COMPLAINT FOR
PATENT INFRINGEMENT

JURY TRIAL DEMANDED

ORIGINAL COMPLAINT FOR PATENT INFRINGEMENT

Plaintiff American Patents LLC (“American Patents” or “Plaintiff”) files this original complaint against Defendants MediaTek Inc., MediaTek USA Inc., Broadcom Pte. Ltd., Broadcom Corporation, Lenovo (Shanghai) Electronics Technology Co. Ltd., Lenovo Group, Ltd., NXP Semiconductors N.V., NXP B.V., NXP USA, Inc., Qualcomm Incorporated, and Qualcomm Technologies, Inc. (collectively “Defendants”), alleging, based on its own knowledge as to itself and its own actions and based on information and belief as to all other matters, as follows:

PARTIES

1. American Patents is a limited liability company formed under the laws of the State of Texas, with its principal place of business at 2325 Oak Alley, Tyler, Texas, 75703.

2. MediaTek Inc. is a company incorporated under the laws of Taiwan, having an address of No. 1, Dusing Road 1, Hsinchu Science Park, Hsinchu City 30078, Taiwan.

3. MediaTek USA Inc. is a company incorporated under the laws of the State of Delaware and having an established place of business at 5914 W. Courtyard Drive, Austin, Texas 78730. MediaTek USA is registered to conduct business in Texas and may be served through its registered agent, CT Corporation System, 1999 Bryan Street, Suite 900, Dallas, Texas 75201-3136.

4. The Defendants identified in paragraphs 2 and 3 above (collectively, “MediaTek”) are companies which together comprise one of the world’s largest manufacturers of integrated circuits.

5. The MediaTek defendants named above are part of the same corporate structure and distribution chain for the making, importing, offering to sell, selling, and/or using of the accused devices in the United States, including in the State of Texas generally and this judicial district in particular.

6. The MediaTek defendants named above share the same management, common ownership, advertising platforms, facilities, distribution chains and platforms, and accused product lines and products involving related technologies.

7. Thus, the MediaTek defendants named above operate as a unitary business venture and are jointly and severally liable for the acts of patent infringement alleged herein.

8. Broadcom Pte. Ltd. is a corporation organized under the laws of the Republic of Singapore. Broadcom Limited has headquarters at 1 Yishun Avenue 7, Singapore 768923.

9. Broadcom Corporation is a corporation organized under the laws of the state of California. Broadcom Corporation can be served with process by serving its registered agent:

Corporation Service Company d/b/a CSC-Lawyers Incorporating Service Company, 211 E. 7th Street, Suite 620, Austin, Texas 78701.

10. The Defendants identified in paragraphs 8 and 9 above (collectively, “Broadcom”) are companies which together comprise one of the world’s largest manufacturers of integrated circuits.

11. The Broadcom defendants named above are part of the same corporate structure and distribution chain for the making, importing, offering to sell, selling, and/or using of the accused devices in the United States, including in the State of Texas generally and this judicial district in particular.

12. The Broadcom defendants named above share the same management, common ownership, advertising platforms, facilities, distribution chains and platforms, and accused product lines and products involving related technologies.

13. Thus, the Broadcom defendants named above operate as a unitary business venture and are jointly and severally liable for the acts of patent infringement alleged herein.

14. Lenovo (Shanghai) Electronics Technology Co. Ltd. is a company organized under the laws of the People’s Republic of China. Lenovo (Shanghai) Electronics Technology Co. Ltd. has an office at No. 68 Building, 199 Fenju Rd., China (Shanghai) Pilot Free Trade Zone, Shanghai, China, 200131.

15. Lenovo Group, Ltd. is a company organized under the laws of the People’s Republic of China. Lenovo Group, Ltd. has an office at No. 6 Chuang Ye Road, Haidian District, Beijing, China, 100085.

16. The Defendants identified in paragraphs 14 and 15 above (collectively, “Lenovo”) are companies which together comprise one of the world’s largest manufacturers of integrated circuits.

17. The Lenovo defendants named above are part of the same corporate structure and distribution chain for the making, importing, offering to sell, selling, and/or using of the accused devices in the United States, including in the State of Texas generally and this judicial district in particular.

18. The Lenovo defendants named above share the same management, common ownership, advertising platforms, facilities, distribution chains and platforms, and accused product lines and products involving related technologies.

19. Thus, the Lenovo defendants named above operate as a unitary business venture and are jointly and severally liable for the acts of patent infringement alleged herein.

20. NXP Semiconductors N.V. is a corporation organized and existing under the laws of the Netherlands, having a place of business at High Tech Campus 60, 5656 AG Eindhoven, the Netherlands.

21. NXP B.V. is a corporation organized and existing under the laws of the Netherlands, having a place of business at High Tech Campus 60, 5656 AG Eindhoven, the Netherlands.

22. NXP USA, Inc. is a corporation organized and existing under the laws of the state of Delaware, having its principal place of business at 6501 William Cannon Drive West, Austin, TX 78735. It can be served via its registered agent: Corporation Service Company d/b/a CSC – Lawyers Inc., 211 E. 7th Street Suite 620, Austin, TX 78701.

23. The Defendants identified in paragraphs 20-22 above (collectively, “NXP”) are companies which together comprise one of the world’s largest manufacturers of integrated circuits.

24. The NXP defendants named above are part of the same corporate structure and distribution chain for the making, importing, offering to sell, selling, and/or using of the accused devices in the United States, including in the State of Texas generally and this judicial district in particular.

25. The NXP defendants named above share the same management, common ownership, advertising platforms, facilities, distribution chains and platforms, and accused product lines and products involving related technologies.

26. Thus, the NXP defendants named above operate as a unitary business venture and are jointly and severally liable for the acts of patent infringement alleged herein.

27. Qualcomm Incorporated is a Delaware corporation. Qualcomm Incorporated may be served through its registered agent, Prentice Hall Corp. System, 211 E. 7th Street Suite 620, Austin, Texas 78701.

28. Qualcomm Technologies, Inc. is a Delaware corporation. Qualcomm Technologies, Inc. may be served through its registered agent, Corporation Service Company d/b/a CSC-Lawyers Inc., 211 E. 7th Street Suite 620, Austin, Texas 78701.

29. The Defendants identified in paragraphs 27 and 28 above (collectively, “Qualcomm”) are companies which together comprise one of the world’s largest manufacturers of integrated circuits.

30. The Qualcomm defendants named above are part of the same corporate structure and distribution chain for the making, importing, offering to sell, selling, and/or using of the

accused devices in the United States, including in the State of Texas generally and this judicial district in particular.

31. The Qualcomm defendants named above share the same management, common ownership, advertising platforms, facilities, distribution chains and platforms, and accused product lines and products involving related technologies.

32. Thus, the Qualcomm defendants named above operate as a unitary business venture and are jointly and severally liable for the acts of patent infringement alleged herein.

33. The parties to this action are properly joined under 35 U.S.C. § 299 because the right to relief asserted against Defendants jointly and severally arises out of the same series of transactions or occurrences relating to the making and using of the same products or processes, including products using the processors and related processes based on common ARM architectures. Additionally, questions of fact common to all defendants will arise in this action.

JURISDICTION AND VENUE

34. This is an action for infringement of United States patents arising under 35 U.S.C. §§ 271, 281, and 284–85, among others. This Court has subject matter jurisdiction of the action under 28 U.S.C. § 1331 and § 1338(a).

35. This Court has personal jurisdiction over Defendants pursuant to due process and/or the Texas Long Arm Statute because, *inter alia*, (i) Defendants have done and continue to do business in Texas and (ii) Defendants have committed and continue to commit acts of patent infringement in the State of Texas, including making, using, offering to sell, and/or selling accused products in Texas, and/or importing accused products into Texas, including by Internet sales and sales via retail and wholesale stores, inducing others to commit acts of patent infringement in Texas, and/or committing a least a portion of any other infringements alleged

herein. In addition, or in the alternative, this Court has personal jurisdiction over Defendants pursuant to Fed. R. Civ. P. 4(k)(2).

36. Venue is proper in this district pursuant to 28 U.S.C. §§ 1391(b), 1391(c), and 1400(b) because (i) MediaTek has done and continues to do business in this district; (ii) MediaTek has committed and continues to commit acts of patent infringement in this district, including making, using, offering to sell, and/or selling accused products in this district, and/or importing accused products into this district, including by internet sales and sales via retail and wholesale stores, and/or inducing others to commit acts of patent infringement in this district; (iii) MediaTek Inc. is a foreign entity; and (iv) MediaTek USA Inc. has a regular and established place of business in this district at 5914 W. Courtyard Drive, Austin, Texas 78730, as stated on MediaTek's website:

<https://www.mediatek.com/about/office-locations/mediatek-usa-offices>

37. Venue is proper as to MediaTek Inc., which is organized under the laws of Taiwan. 28 U.S.C. § 1391(c)(3) provides that “a defendant not resident in the United States may

be sued in any judicial district, and the joinder of such a defendant shall be disregarded in determining where the action may be brought with respect to other defendants.”

38. Venue is proper in this district pursuant to 28 U.S.C. §§ 1391(b), 1391(c), and 1400(b) because (i) Broadcom has done and continues to do business in this district; (ii) Broadcom has committed and continues to commit acts of patent infringement in this district, including making, using, offering to sell, and/or selling accused products in this district, and/or importing accused products into this district, including by internet sales and sales via retail and wholesale stores, and/or inducing others to commit acts of patent infringement in this district; (iii) Broadcom Pte. Ltd. is a foreign entity; and (iv) Broadcom Corporation has regular and established places of business in this district at 2901 Via Fortuna Drive, Suite 400, Floor 4, Terrace 6, Austin, Texas 78746 and 3801 S. Capital of Texas Highway, Barton Creek Plaza II, Suite 150 and 240, Floor 1 and 2, Austin, Texas 78704 as stated on Broadcom’s website:

 <https://www.broadcom.com/company/contact/#locations>

Austin, Texas (Via Fortuna Drive) 2901 Via Fortuna Drive, Suite 400, Floor 4, Terrace 6 Austin, Texas 78746 United States GET DIRECTIONS 	Austin, Texas (S. Capital of Texas Highway) 3801 S. --	--

<https://www.broadcom.com/company/contact/#locations>

39. Venue is proper as to Broadcom Pte. Ltd., which is organized under the laws of the Republic of Singapore. 28 U.S.C. § 1391(c)(3) provides that “a defendant not resident in the United States may be sued in any judicial district, and the joinder of such a defendant shall be disregarded in determining where the action may be brought with respect to other defendants.”

40. Venue is proper in this district pursuant to 28 U.S.C. §§ 1391(b), 1391(c), and 1400(b) because (i) Lenovo has done and continues to do business in this district; (ii) Lenovo has committed and continues to commit acts of patent infringement in this district, including making, using, offering to sell, and/or selling accused products in this district, and/or importing accused products into this district, including by internet sales and sales via retail and wholesale stores, and/or inducing others to commit acts of patent infringement in this district; and (iii) Lenovo (Shanghai) Electronics Technology Co., Ltd. and Lenovo Group, Ltd. are foreign entities.

41. Venue is proper as to Lenovo (Shanghai) Electronics Technology Co., Ltd. and Lenovo Group, Ltd., which are organized under the laws of the People's Republic of China. 28 U.S.C. § 1391(c)(3) provides that "a defendant not resident in the United States may be sued in any judicial district, and the joinder of such a defendant shall be disregarded in determining where the action may be brought with respect to other defendants."

42. Venue is proper in this district pursuant to 28 U.S.C. §§ 1391(b), 1391(c), and 1400(b) because (i) NXP has done and continues to do business in this district; (ii) NXP has committed and continues to commit acts of patent infringement in this district, including making, using, offering to sell, and/or selling accused products in this district, and/or importing accused products into this district, including by internet sales and sales via retail and wholesale stores, and/or inducing others to commit acts of patent infringement in this district; (iii) NXP Semiconductors N.V. and NXP B.V. are foreign entities; and (iv) NXP USA, Inc. has a regular and established place of business in this district at 6501 William Cannon Dr. West, Austin, TX 78735, as stated on NXP's website:

NXP Locations in the United States

43. Venue is proper as to NXP Semiconductors N.V. and NXP B.V., which are organized under the laws of the Netherlands. 28 U.S.C. § 1391(c)(3) provides that “a defendant not resident in the United States may be sued in any judicial district, and the joinder of such a defendant shall be disregarded in determining where the action may be brought with respect to other defendants.”

44. Venue is proper in this district pursuant to 28 U.S.C. §§ 1391(b), 1391(c), and 1400(b) because (i) Qualcomm has done and continues to do business in this district; (ii) Qualcomm has committed and continues to commit acts of patent infringement in this district, including making, using, offering to sell, and/or selling accused products in this district, and/or importing accused products into this district, including by internet sales and sales via retail and wholesale stores, and/or inducing others to commit acts of patent infringement in this district; and (iii) Qualcomm has a regular and established place of business in this district at 9600 N. Mopac, Ste 900, Stonebridge Plaza II, Austin, Texas 78759, as stated on Qualcomm’s website:

2 Offices in TX, USA

<https://www.qualcomm.com/company/facilities/offices?country=USA®ion=TX>

BACKGROUND

45. The patents-in-suit generally pertain to on-chip service capabilities used in integrated circuits. The technology disclosed by the patents was developed in the 1990s by employees of On-Chip Technologies, Inc. including: Dr. Bulent Dervisoglu, who received his Ph.D. in Computer Science from the University of Edinburgh; Laurence H. Cooke, who received a bachelor's degree in Applied Mathematics from Stanford University; and Vacit Arat, who received a master's degree in Electrical Engineering from the University of Houston.

46. Prior to the patented technology, testing and debugging integrated circuits was largely directed to the chip level of integrated circuits. These approaches led to higher costs (including sometimes doubled circuitry for testing) and longer time-to-market for integrated circuit products.

47. Then, pioneers such as Dr. Dervisoglu and his colleagues solved these problems when they invented their patented on-chip service and testing that uses embedded testing circuitry within an integrated circuit to provide for custom testing with minimal cost addition and

improved time-to-market. Their ideas were recognized by *Evaluation Engineering* after Dr. Dervisoglu's presentation at the 1999 International Test Conference, and their solution is widely used throughout the industry.

48. After issuance, the validity of one of the patents-in-suit, the '371 Patent, was tested in an inter partes review. In a Final Written Decision, the PTAB ultimately confirmed the validity of claims 2 and 7-10 of the '371 Patent, imposing estoppel on Toshiba Corporation, Toshiba America, Inc., Toshiba America Electronic Components, Inc., and Toshiba America Information Systems, Inc., and their privies, from further challenging the validity of those claims.

COUNT I

DIRECT INFRINGEMENT OF U.S. PATENT NO. 6,964,001

49. On November 8, 2005, United States Patent No. 6,964,001 ("the '001 Patent") was duly and legally issued by the United States Patent and Trademark Office for an invention entitled "On-Chip Service Processor."

50. American Patents is the owner of the '001 Patent, with all substantive rights in and to that patent, including the sole and exclusive right to prosecute this action and enforce the '001 Patent against infringers, and to collect damages for all relevant times.

51. MediaTek made, had made, used, imported, provided, supplied, distributed, sold, and/or offered for sale products and/or systems including, for example, its MT6595, Helio X10, and Helio X27 families of products that include advanced on-chip service capabilities ("accused products")¹:

¹ A non-exhaustive list of additional accused products includes the MT6739, MT6750, MT6752, MT6753, Helio P, Helio A22, MT7622, MT7623, MT8x series (including MT8173, MT8176,

MT6595

The world's first octa-core 4G LTE smartphone chip with the new
ARM Cortex-A17 processor

MediaTek MT6795 is a high-performance SoC which satisfies multimedia requirements of even the most demanding users, featuring multimedia subsystems that support many technologies never before possible or seen in a smartphone, including support for 120Hz displays and the capability to create and playback 480 frames per second (fps) 1080p Full HD Super-Slow Motion videos. MT6795 embeds a range of MediaTek technologies, including: MediaTek CorePilot™ heterogeneous multiprocessing technology which unlocks the power of all eight cores for outstanding performance with ultra-low power consumption and thermal control, as well as dual-channel LPDDR3 clocked at 933MHz for top-end memory bandwidth in a smartphone. MediaTek ClearMotion™ technology to eliminate motion jitter and ensure smooth video playback on mobile devices.

64-bit true octa-core SoC with LTE and world's first 2K display
support

MediaTek Helio X10 (MT6795) is a high-performance SoC which satisfies multimedia requirements of even the most demanding users, featuring multimedia subsystems that support many technologies never before possible or seen in a smartphone, including support for 120Hz displays and the capability to create and playback 480 frames per second (fps) 1080p Full HD Super-Slow Motion videos. MT6795 embeds a range of MediaTek technologies, including: MediaTek CorePilot™ heterogeneous multiprocessing technology which unlocks the power of all eight cores for outstanding performance with ultra-low power consumption and thermal control, as well as dual-channel LPDDR3 clocked at 933MHz for top-end memory bandwidth in a smartphone. MediaTek ClearMotion™ technology to eliminate motion jitter and ensure smooth video playback on mobile devices.

BCM58712

Quad-Core 2.0GHz 64-bit ARM®v8 Cortex®-A57 based SoC

OVERVIEW SPECIFICATIONS DOCUMENTATION OPTIONAL PRODUCTS

The BCM5871x is a series of quad-core 64-bit 2GHz ARM® v8 Cortex®-A57 communication processors targeting a broad range of networking applications including virtual CPE (vCPE) and NFV appliances, 10G service routers and gateways, control plane processing for Ethernet switches, and network attached storage (NAS). The BCM5871x combines advanced computing, networking and virtualization functions on a single SoC with the industry's first quad-core A57 CPU delivering 34,000 DMIPS below 10 watts, providing unprecedented levels of integration and setting a new bar on performance and power efficiency.

The BCM5871x integrates Broadcom's server class network interface controller with virtualization, stateless offloads, and packet processing capabilities. As result, the BCM5871X networking interfaces can be shared across various VMs, increasing productivity and bandwidth efficiency. Moreover, Broadcom's TruFlow™ packet flow processing technology enables Open vSwitch acceleration through CPU offload helping to scale and increase VNF density, in addition to offering flexible Software-Defined Networking (SDN) provisioning and policy controls.

downloaded from <https://static.docs.arm.com/ihl0014/q/IHL0014.pdf>

About controlling tracing

You control tracing in two ways:

- | | |
|-------------------|---|
| Triggering | Triggering controls when the collection of the trace data occurs. Setting a trigger enables you to focus trace collection around your region of interest. |
| Filtering | <p>Filtering controls the type of trace information that is collected. It is important to optimize usage of the trace port bandwidth, especially when a narrow trace port is used. Filtering the trace serves two purposes:</p> <ul style="list-style-type: none"> • It prevents overflow of the internal FIFO by minimizing the number of data transfers traced. This is especially important when the FIFO is small or the trace port is narrow. • It limits the amount of trace stored by the <i>trace capture device</i> (TCD), for example a TPA or an on-chip trace buffer. This enables more useful information to be stored around the trigger. |

You can filter the instruction trace or the data trace as follows:

- Filter the instruction trace by enabling and disabling trace generation. This is the **TraceEnable** function.
- Filter the data trace by indicating the specific data accesses that must be traced. This is the **ViewData** function.

Source: ARM Embedded Trace Macrocell ETMv1.0 to ETMv3.5 Architecture Specification
downloaded from <https://static.docs.arm.com/ihl0014/q/IHL0014.pdf>

In this specification:

- An ETM is said to be tracing when **TraceEnable** is active and no condition exists that prohibits tracing. Conditions that prohibit tracing include:
 - The processor is in Debug state.
 - The processor is in a *Wait For Interrupt* (WFI) or *Wait For Event* (WFE) condition. See *Wait For Interrupt and Wait For Event on page 4-251*.

The ETM has the following main features:

Core interface module

The core interface module monitors the behavior of the processor.

Trace generation

The ETM generates a real-time trace that can be configured to include:

- instruction tracing containing:
 - the addresses of executed instructions
 - passed or failed condition codes of the instructions
 - information about exceptions
 - context IDs.
- data address tracing containing the addresses of data transfers as viewed by the ARM architecture.

62. The input ports of the on-chip logic analyzer of the accused products comprises means to capture said signals from said probe lines.

63. The input ports of the on-chip logic analyzer of the accused products comprises means to align said signals propagated through said probe lines to create aligned signals.

64. The input ports of the on-chip logic analyzer of the accused products comprises means to capture said aligned signals.

65. Defendants have had knowledge of the '001 Patent at least as of the date when they were notified of the filing of this action.

66. On November 23, 2005, the parent of the '001 Patent (U.S. Patent No. 6,687,865) was cited by the Examiner during prosecution of U.S. Patent No. 7,567,892, which is assigned to Broadcom Corp. The Examiner in that prosecution explained that the parent of the '001 Patent was pertinent because "Dervisoglu et al. (U.S. Patent No. 6,687,865) discloses an on-chip service processor for testing and debugging of integrated circuits." Broadcom employees Geoff Barrett,

Simon Christopher Dequin Clemow, and Andrew Jon Dawson, who are listed as inventors on U.S. Patent No. 7,567,892, Robert Sokohl, Jeffrey S. Weaver, and others involved in the prosecution of the patent, have had knowledge of the '001 Patent well before this suit was filed.

67. On March 6, 2006, the parent of the '001 Patent (U.S. Patent No. 6,687,865) was cited in an IDS during prosecution of U.S. Patent No. 7,533,315, which is assigned to Mediatek Inc. During that same prosecution, the Examiner also cited the child of the '001 Patent (U.S. Patent No. 7,080,301) on June 18, 2008. MediaTek employees I-Chieh Han and You-Ming Chiu, who are listed as inventors on U.S. Patent No. 7,533,315, Daniel R. McClure, and others involved in the prosecution of the patent, have had knowledge of the '001 Patent well before this suit was filed.

68. American Patents has been damaged as a result of the infringing conduct by Defendants alleged above. Thus, Defendants are liable to American Patents in an amount that adequately compensates it for such infringements, which, by law, cannot be less than a reasonable royalty, together with interest and costs as fixed by this Court under 35 U.S.C. § 284.

69. American Patents and/or its predecessors-in-interest have satisfied all statutory obligations required to collect pre-filing damages for the full period allowed by law for infringement of the '001 Patent.

COUNT II

DIRECT INFRINGEMENT OF U.S. PATENT NO. 7,836,371

70. On November 16, 2010, United States Patent No. 7,836,371 (“the ‘371 Patent”) was duly and legally issued by the United States Patent and Trademark Office for an invention entitled “On-Chip Service Processor.”

71. American Patents is the owner of the ‘371 Patent, with all substantive rights in and to that patent, including the sole and exclusive right to prosecute this action and enforce the ‘371 Patent against infringers, and to collect damages for all relevant times.

72. MediaTek made, had made, used, imported, provided, supplied, distributed, sold, and/or offered for sale products and/or systems including, for example, its MT6595, Helio X10, and Helio X27 families of products that include advanced on-chip service capabilities (“accused products”)⁴:

MT6595

The world's first octa-core 4G LTE smartphone chip with the new
ARM Cortex-A17 processor

MediaTek MT6795 is a high-performance SoC which satisfies multimedia requirements of even the most demanding users, featuring multimedia subsystems that support many technologies never before possible or seen in a smartphone, including support for 120Hz displays and the capability to create and playback 480 frames per second (fps) 1080p Full HD Super-Slow Motion videos. MT6595 embeds a range of MediaTek technologies, including: MediaTek CorePilot™ heterogeneous multiprocessing technology which unlocks the power of all eight cores for outstanding performance with ultra-low power consumption and thermal control, as well as dual-channel LPDDR3 clocked at 933MHz for top-end memory bandwidth in a smartphone. MediaTek ClearMotion™ technology to eliminate motion jitter and ensure smooth video playback on mobile devices.

Products / Embedded and Networking Processors / Communications Processors / BCM58712

BCM58712

Quad-Core 2.0GHz 64-bit ARM®v8 Cortex®-A57 based SoC

OVERVIEW SPECIFICATIONS DOCUMENTATION OPTIONAL PRODUCTS

The BCM5871X is a series of quad-core 64-bit 2GHz ARM® v8 Cortex®-A57 communication processors targeting a broad range of networking applications including virtual CPE (vCPE) and NFV appliances, 10G service routers and gateways, control plane processing for Ethernet switches, and network attached storage (NAS). The BCM5871x combines advanced computing, networking and virtualization functions on a single SoC with the industry's first quad-core A57 CPU delivering 34,000 DMIPS below 10 watts, providing unprecedented levels of integration and setting a new bar on performance and power efficiency.

The BCM5871x integrates Broadcom's server class network interface controller with virtualization, stateless offloads, and packet processing capabilities. As result, the BCM5871X networking interfaces can be shared across various VMs, increasing productivity and bandwidth efficiency. Moreover, Broadcom's TruFlow™ packet flow processing technology enables Open vSwitch acceleration through CPU offload helping to scale and increase VNF density, in addition to offering flexible Software-Defined Networking (SDN) provisioning and policy controls.

 downloaded from <https://static.docs.arm.com/ih0014/q/IHI0014.pdf>

About controlling tracing

You control tracing in two ways:

- | | |
|-------------------|---|
| Triggering | Triggering controls when the collection of the trace data occurs. Setting a trigger enables you to focus trace collection around your region of interest. |
| Filtering | <p>Filtering controls the type of trace information that is collected. It is important to optimize usage of the trace port bandwidth, especially when a narrow trace port is used. Filtering the trace serves two purposes:</p> <ul style="list-style-type: none"> • It prevents overflow of the internal FIFO by minimizing the number of data transfers traced. This is especially important when the FIFO is small or the trace port is narrow. • It limits the amount of trace stored by the <i>trace capture device</i> (TCD), for example a TPA or an on-chip trace buffer. This enables more useful information to be stored around the trigger. |

You can filter the instruction trace or the data trace as follows:

- Filter the instruction trace by enabling and disabling trace generation. This is the **TraceEnable** function.
- Filter the data trace by indicating the specific data accesses that must be traced. This is the **ViewData** function.

Source: ARM Embedded Trace Macrocell ETMv1.0 to ETMv3.5 Architecture Specification
downloaded from <https://static.docs.arm.com/ih0014/q/IHI0014.pdf>

In this specification:

- An ETM is said to be tracing when **TraceEnable** is active and no condition exists that prohibits tracing. Conditions that prohibit tracing include:
 - The processor is in Debug state.
 - The processor is in a *Wait For Interrupt* (WFI) or *Wait For Event* (WFE) condition. See *Wait For Interrupt and Wait For Event on page 4-251*.

83. Defendants have had knowledge of the ‘371 Patent at least as of the date when they were notified of the filing of this action.

84. On November 23, 2005, the great-grandparent of the ‘371 Patent (U.S. Patent No. 6,687,865) was cited by the Examiner during prosecution of U.S. Patent No. 7,567,892, which is assigned to Broadcom Corp. The Examiner in that prosecution explained that the great-grandparent of the ‘371 Patent was pertinent because “Dervisoglu et al. (U.S. Patent No. 6,687,865) discloses an on-chip service processor for testing and debugging of integrated circuits.” Broadcom employees Geoff Barrett, Simon Christopher Dequin Clemow, and Andrew Jon Dawson, who are listed as inventors on U.S. Patent No. 7,567,892, Robert Sokohl, Jeffrey S. Weaver, and others involved in the prosecution of the patent, have had knowledge of the ‘371 Patent well before this suit was filed.

85. On March 6, 2006, the great-grandparent of the ‘371 Patent (U.S. Patent No. 6,687,865) was cited in an IDS during prosecution of U.S. Patent No. 7,533,315, which is assigned to Mediatek Inc. During that same prosecution, the Examiner also cited the parent of the ‘371 Patent (U.S. Patent No. 7,080,301) on June 18, 2008. MediaTek employees I-Chieh Han and You-Ming Chiu, who are listed as inventors on U.S. Patent No. 7,533,315, Daniel R.

McClure, and others involved in the prosecution of the patent, have had knowledge of the ‘371 Patent well before this suit was filed.

86. American Patents has been damaged as a result of the infringing conduct by Defendants alleged above. Thus, Defendants are liable to American Patents in an amount that adequately compensates it for such infringements, which, by law, cannot be less than a reasonable royalty, together with interest and costs as fixed by this Court under 35 U.S.C. § 284.

87. American Patents and/or its predecessors-in-interest have satisfied all statutory obligations required to collect pre-filing damages for the full period allowed by law for infringement of the ‘371 Patent.

COUNT III

DIRECT INFRINGEMENT OF U.S. PATENT NO. 8,239,716

88. On August 7, 2012, United States Patent No. 8,239,716 (“the ‘716 Patent”) was duly and legally issued by the United States Patent and Trademark Office for an invention entitled “On-Chip Service Processor.”

89. American Patents is the owner of the ‘716 Patent, with all substantive rights in and to that patent, including the sole and exclusive right to prosecute this action and enforce the ‘716 Patent against infringers, and to collect damages for all relevant times.

90. MediaTek made, had made, used, imported, provided, supplied, distributed, sold, and/or offered for sale products and/or systems including, for example, its MT6595, Helio X10, and Helio X27 families of products that include advanced on-chip service capabilities (“accused products”)⁷:

The BCM5871x is a series of quad-core 64-bit 2GHz ARM® v8 Cortex®-A57 communication processors targeting a broad range of networking applications including virtual CPE (vCPE) and NFV appliances, 10G service routers and gateways, control plane processing for Ethernet switches, and network attached storage (NAS). The BCM5871x combines advanced computing, networking and virtualization functions on a single SoC with the industry's first quad-core A57 CPU delivering 34,000 DMIPS below 10 watts, providing unprecedented levels of integration and setting a new bar on performance and power efficiency.

The BCM5871x integrates Broadcom's server class network interface controller with virtualization, stateless offloads, and packet processing capabilities. As result, the BCM5871X networking interfaces can be shared across various VMs, increasing productivity and bandwidth efficiency. Moreover, Broadcom's TruFlow™ packet flow processing technology enables Open vSwitch acceleration through CPU offload helping to scale and increase VNF density, in addition to offering flexible Software-Defined Networking (SDN) provisioning and policy controls.

 downloaded from <https://static.docs.arm.com/ih0014/q/IHI0014.pdf>

About controlling tracing

You control tracing in two ways:

- | | |
|-------------------|---|
| Triggering | Triggering controls when the collection of the trace data occurs. Setting a trigger enables you to focus trace collection around your region of interest. |
| Filtering | <p>Filtering controls the type of trace information that is collected. It is important to optimize usage of the trace port bandwidth, especially when a narrow trace port is used. Filtering the trace serves two purposes:</p> <ul style="list-style-type: none"> • It prevents overflow of the internal FIFO by minimizing the number of data transfers traced. This is especially important when the FIFO is small or the trace port is narrow. • It limits the amount of trace stored by the <i>trace capture device</i> (TCD), for example a TPA or an on-chip trace buffer. This enables more useful information to be stored around the trigger. |

You can filter the instruction trace or the data trace as follows:

- Filter the instruction trace by enabling and disabling trace generation. This is the **TraceEnable** function.
- Filter the data trace by indicating the specific data accesses that must be traced. This is the **ViewData** function.

Source: ARM Embedded Trace Macrocell ETMv1.0 to ETMv3.5 Architecture Specification
downloaded from <https://static.docs.arm.com/ih0014/q/IHI0014.pdf>

In this specification:

- An ETM is said to be tracing when **TraceEnable** is active and no condition exists that prohibits tracing. Conditions that prohibit tracing include:
 - The processor is in Debug state.
 - The processor is in a *Wait For Interrupt* (WFI) or *Wait For Event* (WFE) condition. See *Wait For Interrupt and Wait For Event on page 4-251*.

99. The service processor unit of the accused products includes a control unit, a buffer memory, an analysis engine, and a bus interface.

100. The accused products include a multiplicity of probe lines configured to capture and propagate one or more of said one or more system operation signals from said logic blocks to said service processor unit during normal system operation.

101. The accused products include said analysis engine configured to align signals received from said probe lines during normal system operation.

102. Defendants have had knowledge of the ‘716 Patent at least as of the date when they were notified of the filing of this action.

103. On November 23, 2005, the great-great-grandparent of the ‘716 Patent (U.S. Patent No. 6,687,865) was cited by the Examiner during prosecution of U.S. Patent No. 7,567,892, which is assigned to Broadcom Corp. The Examiner in that prosecution explained that the great-great-grandparent of the ‘716 Patent was pertinent because “Dervisoglu et al. (U.S. Patent No. 6,687,865) discloses an on-chip service processor for testing and debugging of integrated circuits.” Broadcom employees Geoff Barrett, Simon Christopher Dequin Clemow, and Andrew Jon Dawson, who are listed as inventors on U.S. Patent No. 7,567,892, Robert

Sokohl, Jeffrey S. Weaver, and others involved in the prosecution of the patent, have had knowledge of the ‘716 Patent well before this suit was filed.

104. On March 6, 2006, the great-great grandparent of the ‘716 Patent (U.S. Patent No. 6,687,865) was cited in an IDS during prosecution of U.S. Patent No. 7,533,315, which is assigned to Mediatek Inc. During that same prosecution, the Examiner also cited the grandparent of the ‘716 Patent (U.S. Patent No. 7,080,301) on June 18, 2008. MediaTek employees I-Chieh Han and You-Ming Chiu, who are listed as inventors on U.S. Patent No. 7,533,315, Daniel R. McClure, and others involved in the prosecution of the patent, have had knowledge of the ‘716 Patent well before this suit was filed.

105. American Patents has been damaged as a result of the infringing conduct by Defendants alleged above. Thus, Defendants are liable to American Patents in an amount that adequately compensates it for such infringements, which, by law, cannot be less than a reasonable royalty, together with interest and costs as fixed by this Court under 35 U.S.C. § 284.

106. American Patents and/or its predecessors-in-interest have satisfied all statutory obligations required to collect pre-filing damages for the full period allowed by law for infringement of the ‘716 Patent.

COUNT IV

DIRECT INFRINGEMENT OF U.S. PATENT NO. 8,996,938

107. On March 31, 2015, United States Patent No. 8,996,938 (“the ‘938 Patent”) was duly and legally issued by the United States Patent and Trademark Office for an invention entitled “On-Chip Service Processor.”

108. American Patents is the owner of the ‘938 Patent, with all substantive rights in and to that patent, including the sole and exclusive right to prosecute this action and enforce the ‘938 Patent against infringers, and to collect damages for all relevant times.

109. MediaTek made, had made, used, imported, provided, supplied, distributed, sold, and/or offered for sale products and/or systems including, for example, its MT6595, Helio X10, and Helio X27 families of products that include advanced on-chip service capabilities (“accused products”)¹⁰:

MT6595

The world's first octa-core 4G LTE smartphone chip with the new
ARM Cortex-A17 processor

MediaTek MT6795 is a high-performance SoC which satisfies multimedia requirements of even the most demanding users, featuring multimedia subsystems that support many technologies never before possible or seen in a smartphone, including support for 120Hz displays and the capability to create and playback 480 frames per second (fps) 1080p Full HD Super-Slow Motion videos. MT6595 embeds a range of MediaTek technologies, including: MediaTek CorePilot™ heterogeneous multiprocessing technology which unlocks the power of all eight cores for outstanding performance with ultra-low power consumption and thermal control, as well as dual-channel LPDDR3 clocked at 933MHz for top-end memory bandwidth in a smartphone. MediaTek ClearMotion™ technology to eliminate motion jitter and ensure smooth video playback on mobile devices.

Processor	MediaTek™ 8161 Quad-Core Processor (1.30GHz 1MB)
-----------	--

Source: <https://www.lenovo.com/us/en/tablets/android-tablets/tab3-series/Lenovo-Tab-3-10-Business/p/ZZITZTATB2F>

The MediaTek MT8161 is an ARM based entry-level to mid-range SoC for (Android based) tablets. It offers four ARM Cortex-A53 processor cores (quad-core) that are clocked with up to 1.3 GHz. Furthermore, an ARM Mali-720 graphics card, a LPDDR3 memory controller (e.g., accessing 1 GB in the Lenovo Tab 2 A8-50), Bluetooth 4.0 and dual-band 802.11 b/g/n are integrated in the SoC.

114. By doing so, Defendants have directly infringed (literally and/or under the doctrine of equivalents) at least Claim 1 of the '938 Patent. Defendants' infringement in this regard is ongoing.

115. Defendants have infringed the '938 Patent by making, having made, using, importing, providing, supplying, distributing, selling or offering for sale integrated circuits having advanced on-chip service capabilities.

116. The accused products include one or more logic blocks configured to generate one or more system operation signals at one or more system operation clock rates.

About the ETM

The ETM is a CoreSight™ component designed for use with the CoreSight Design Kit. CoreSight is the ARM extensible, system-wide debug and trace architecture. The Cortex-A8 processor implements the ETM architecture v3.3.

About controlling tracing

You control tracing in two ways:

- | | |
|-------------------|---|
| Triggering | Triggering controls when the collection of the trace data occurs. Setting a trigger enables you to focus trace collection around your region of interest. |
| Filtering | <p>Filtering controls the type of trace information that is collected. It is important to optimize usage of the trace port bandwidth, especially when a narrow trace port is used. Filtering the trace serves two purposes:</p> <ul style="list-style-type: none"> • It prevents overflow of the internal FIFO by minimizing the number of data transfers traced. This is especially important when the FIFO is small or the trace port is narrow. • It limits the amount of trace stored by the <i>trace capture device</i> (TCD), for example a TPA or an on-chip trace buffer. This enables more useful information to be stored around the trigger. |

You can filter the instruction trace or the data trace as follows:

- Filter the instruction trace by enabling and disabling trace generation. This is the **TraceEnable** function.
- Filter the data trace by indicating the specific data accesses that must be traced. This is the **ViewData** function.

Source: ARM Embedded Trace Macrocell ETMv1.0 to ETMv3.5 Architecture Specification
downloaded from <https://static.docs.arm.com/ih0014/q/IHI0014.pdf>

In this specification:

- An ETM is said to be tracing when **TraceEnable** is active and no condition exists that prohibits tracing. Conditions that prohibit tracing include:
 - The processor is in Debug state.
 - The processor is in a *Wait For Interrupt* (WFI) or *Wait For Event* (WFE) condition. See *Wait For Interrupt and Wait For Event on page 4-251*.

118. The service processor unit of the accused products includes a control unit configured to control the service processor unit, a memory, an analysis engine, and a bus interface.

119. The accused products include a multiplicity of probe lines configured to capture and propagate one or more of the one or more system operation signals from said logic blocks to the service processor unit.

120. Defendants have had knowledge of the '938 Patent at least as of the date when they were notified of the filing of this action.

121. On November 23, 2005, the great-great-great-grandparent of the '938 Patent (U.S. Patent No. 6,687,865) was cited by the Examiner during prosecution of U.S. Patent No. 7,567,892, which is assigned to Broadcom Corp. The Examiner in that prosecution explained that the great-great-great-grandparent of the '938 Patent was pertinent because "Dervisoglu et al. (U.S. Patent No. 6,687,865) discloses an on-chip service processor for testing and debugging of integrated circuits." Broadcom employees Geoff Barrett, Simon Christopher Dequin Clemow, and Andrew Jon Dawson, who are listed as inventors on U.S. Patent No. 7,567,892, Robert

Sokohl, Jeffrey S. Weaver, and others involved in the prosecution of the patent, have had knowledge of the '938 Patent well before this suit was filed.

122. On March 6, 2006, the great-great-great grandparent of the '938 Patent (U.S. Patent No. 6,687,865) was cited in an IDS during prosecution of U.S. Patent No. 7,533,315, which is assigned to MediaTek Inc. During that same prosecution, the Examiner also cited the great grandparent of the '938 Patent (U.S. Patent No. 7,080,301) on June 18, 2008. MediaTek employees I-Chieh Han and You-Ming Chiu, who are listed as inventors on U.S. Patent No. 7,533,315, Daniel R. McClure, and others involved in the prosecution of the patent, have had knowledge of the '938 Patent well before this suit was filed.

123. American Patents has been damaged as a result of the infringing conduct by Defendants alleged above. Thus, Defendants are liable to American Patents in an amount that adequately compensates it for such infringements, which, by law, cannot be less than a reasonable royalty, together with interest and costs as fixed by this Court under 35 U.S.C. § 284.

124. American Patents and/or its predecessors-in-interest have satisfied all statutory obligations required to collect pre-filing damages for the full period allowed by law for infringement of the '938 Patent.

ADDITIONAL ALLEGATIONS REGARDING INDIRECT INFRINGEMENT

125. Defendants have also indirectly infringed the '001 Patent, the '371 Patent, the '716 Patent, and the '938 Patent by inducing others to directly infringe the '001 Patent, the '371 Patent, the '716 Patent, and the '938 Patent. Defendants have induced the end-users, its customers, to directly infringe (literally and/or under the doctrine of equivalents) the '001 Patent, the '371 Patent, the '716 Patent, and the '938 Patent by using the accused products. Defendants took active steps, directly and/or through contractual relationships with others, with the specific

intent to cause them to use the accused products in a manner that infringes one or more claims of the patents-in-suit, including, for example, Claim 5 of the ‘001 Patent, Claim 7 of the ‘371 Patent, Claim 1 of the ‘716 Patent, and Claim 1 of the ‘938 Patent. Such steps by Defendants included, among other things, advising or directing customers and end-users to use the accused products in an infringing manner; advertising and promoting the use of the accused products in an infringing manner; and/or distributing instructions that guide users to use the accused products in an infringing manner. Defendants are performing these steps, which constitute induced infringement, with the knowledge of the ‘001 Patent, the ‘371 Patent, the ‘716 Patent, and the ‘938 Patent and with the knowledge that the induced acts constitute infringement. Defendants were and are aware that the normal and customary use of the accused products by Defendants’ customers would infringe the ‘001 Patent, the ‘371 Patent, the ‘716 Patent, and the ‘938 Patent. Defendants’ inducement is ongoing.

126. Defendants have also induced its affiliates, or third-party manufacturers, shippers, distributors, retailers, or other persons acting on its or its affiliates’ behalf, to directly infringe (literally and/or under the doctrine of equivalents) the ‘001 Patent, the ‘371 Patent, the ‘716 Patent, and the ‘938 Patent by importing, selling or offering to sell the accused products. Defendants took active steps, directly and/or through contractual relationships with others, with the specific intent to cause such persons to import, sell, or offer to sell the accused products in a manner that infringes one or more claims of the patents-in-suit, including, for example, Claim 5 of the ‘001 Patent, Claim 7 of the ‘371 Patent, Claim 1 of the ‘716 Patent, and Claim 1 of the ‘938 Patent. Such steps by Defendants included, among other things, making or selling the accused products outside of the United States for importation into or sale in the United States, or knowing that such importation or sale would occur; and directing, facilitating, or influencing its

affiliates, or third-party manufacturers, shippers, distributors, retailers, or other persons acting on its behalf, to import, sell, or offer to sell the accused products in an infringing manner.

Defendants performed these steps, which constitute induced infringement, with the knowledge of the '001 Patent, the '371 Patent, the '716 Patent, and the '938 Patent and with the knowledge that the induced acts would constitute infringement. Defendants performed such steps in order to profit from the eventual sale of the accused products in the United States. Defendants' inducement is ongoing.

127. Defendants have also indirectly infringed by contributing to the infringement of the '001 Patent, the '371 Patent, the '716 Patent, and the '938 Patent. Defendants have contributed to the direct infringement of the '001 Patent, the '371 Patent, the '716 Patent, and the '938 Patent by the end-user of the accused products. The accused products have special features that are specially designed to be used in an infringing way and that have no substantial uses other than ones that infringe the '001 Patent, the '371 Patent, the '716 Patent, and the '938 Patent, including, for example, Claim 5 of the '001 Patent, Claim 7 of the '371 Patent, Claim 1 of the '716 Patent, and Claim 1 of the '938 Patent. The special features include advanced on-chip service capabilities in a manner that infringes the '001 Patent, the '371 Patent, the '716 Patent, and the '938 Patent. The special features constitute a material part of the invention of one or more of the claims of the '001 Patent, the '371 Patent, the '716 Patent, and the '938 Patent and are not staple articles of commerce suitable for substantial non-infringing use. Defendants' contributory infringement is ongoing.

128. Furthermore, Defendants have a policy or practice of not reviewing the patents of others (including instructing its employees to not review the patents of others), and thus has been willfully blind of American Patents' patent rights.

129. Defendants' actions are at least objectively reckless as to the risk of infringing valid patents and this objective risk was either known or should have been known by Defendants.

130. Defendants' direct and indirect infringement of the '001 Patent, the '371 Patent, the '716 Patent, and the '938 Patent is, has been, and continues to be willful, intentional, deliberate, and/or in conscious disregard of American Patents' rights under the patents.

131. American Patents has been damaged as a result of the infringing conduct by Defendants alleged above. Thus, Defendants are liable to American Patents in an amount that adequately compensates it for such infringements, which, by law, cannot be less than a reasonable royalty, together with interest and costs as fixed by this Court under 35 U.S.C. § 284.

JURY DEMAND

American Patents hereby requests a trial by jury on all issues so triable by right.

PRAYER FOR RELIEF

American Patents requests that the Court find in its favor and against Defendants, and that the Court grant American Patents the following relief:

a. Judgment that one or more claims of the '001 Patent, the '371 Patent, the '716 Patent, and the '938 Patent have been infringed, either literally and/or under the doctrine of equivalents, by Defendants and/or all others acting in concert therewith;

b. A permanent injunction enjoining Defendants and their officers, directors, agents, servants, affiliates, employees, divisions, branches, subsidiaries, parents, and all others acting in concert therewith from infringement of the '001 Patent, the '371 Patent, the '716 Patent, and the '938 Patent; or, in the alternative, an award of a reasonable ongoing royalty for future infringement of the '001 Patent, the '371 Patent, the '716 Patent, and the '938 Patent;

e. Judgment that Defendants account for and pay to American Patents all damages to

and costs incurred by American Patents because of Defendants' infringing activities and other conduct complained of herein, including an award of all increased damages to which American Patents is entitled under 35 U.S.C. § 284;

f. That American Patents be granted pre-judgment and post-judgment interest on the damages caused by Defendants' infringing activities and other conduct complained of herein;

g. That this Court declare this an exceptional case and award American Patents its reasonable attorney's fees and costs in accordance with 35 U.S.C. § 285; and

h. That American Patents be granted such other and further relief as the Court may deem just and proper under the circumstances.
